PROFESSIONAL SUMMARY

Innovative Computer Science graduate (B.Tech, CGPA 7.19/10) specializing in secure networking, decentralized systems, and applied AI. Built customer-facing AI systems across healthcare and agriculture, including a smart agriculture platform that combines apple leaf disease detection, satellite-based crop health monitoring, and climate-risk prediction. Strong skills in cryptography (ECDH, ECDSA, AES-GCM), AI/ML, and frontend development with AI integration.

EDUCATION

University of Kashmir

B.Tech Computer Science & Engineering, CGPA: 7.19/10

Srinagar, India

Dec 2021 – Nov 2025

New Convent School

Higher Secondary (Non-Medical)

Srinagar, India

Jan 2019 – Jan 2021

EXPERIENCE

Rochester Institute of Technology (Excelerate Internship)

Remote

AI Vibe Analysis Engineer Intern

Mar 2025 – May 2025

- Engineered sentiment analysis pipeline with 25% improved NLP dataset interpretability using PyTorch.
- Developed React-based AI frontend modules serving 500+ user interactions with real-time visualizations.

Edunet Foundation (TechSaksham: Microsoft & SAP)

Remote

Artificial Intelligence Intern

Oct 2024 – Jan 2025

- Developed **AI-Powered Medical Diagnosis System** achieving **87% accuracy with SVM classifiers**.
- Implemented ML models (SVM, Decision Trees) on healthcare datasets using Scikit-learn and Pandas.
- Deployed interactive Streamlit interface used by 50+ medical professionals for real-time predictions.

PROJECTS

OrchardIntel: Apple Disease & Climate Risk Advisor

Dec 2025

- Designed an end-to-end platform that unifies apple leaf disease detection, satellite-based crop health monitoring, and climate-risk prediction to support farmers' decision-making.
- Trained image-classification models on apple leaf datasets and integrated satellite imagery APIs (Planet-style) plus weather data to compute vegetation indices and risk scores exposed through an interactive dashboard.

NodeLink/Kraken: Decentralized E2E Encrypted Messenger

2024 – 2025

- Built privacy-focused messaging platform with **AES-GCM encryption, ECDH key exchange, and ECDSA authentication**.
- Integrated **MetaMask Web3 login** and **Supabase/GUN.js** for decentralized storage serving 100+ concurrent users.
- Engineered real-time crypto wallet transactions within uncensored P2P messaging infrastructure.

AI Medical Diagnosis System | Python, Scikit-learn, Streamlit

Oct 2024 – Jan 2025

- Deployed ML models achieving **87% accuracy** for disease prediction on healthcare datasets, using SVM and Decision Tree classifiers.
- Created an interactive Streamlit dashboard enabling real-time analysis for medical professionals while emphasizing secure, ethical handling of healthcare data.

Magisk on WSA: Android Root Solution

Oct 2021

- Ported Magisk root to Windows Subsystem for Android, enabling full app customization.
- Removed Amazon Appstore restrictions, supporting sideloaded APKs across all apps.

TECHNICAL SKILLS

Languages: Python, JavaScript/TypeScript, C, HTML/CSS

AI/ML: Scikit-learn, PyTorch, TensorFlow, Pandas, NumPy, Matplotlib; ML models (supervised and unsupervised)

Frameworks: React, Node.js, Expo, Streamlit

DevOps/Systems: Git, VS Code, Windows Administration, Hyper-V, WSA, Cryptography (ECDH, ECDSA, AES-GCM)

Platforms: Supabase, GUN.js, MetaMask, Netlify, Web3
